## Install the end links

Note: If installing SS701/SS702 at this time, you will use two of the OEM saddle bracket bolts with the factory end link nuts, instead of the OEM end link bolts.

Install the **end link assembly (Item 2)** to the frame using the factory holes and hardware removed in the previous step. Note: Use Loctite on the nuts and bolts of the assembly and torque to factory spec.

## Hang Sway Bar

Install ends of **SS111 sway bar (Item 1)** to bottom ears of installed end links hanging from the frame using the two **1/2X13X3" Bolts (Item 4)** with bolt head facing towards the outside. Use **1/2" flat washers (Item 5)** and **1/2" lock nuts (Item 6)** to secure. Leave loose for now.

## Grease Poly Bushings and Install Bar

Note: If installing SS701/SS702 Trac Bar at the same time, the order of steps may change. Please refer to the SS110/SS701 combo instructions if this is the case.

Swing the sway bar up in position and take note of where the bushings will be located on the bar itself. Grease the inside of the **poly bushings (Item 3)** with supplied aqua lube. Install poly bushings on the bar in the spots noted and install the saddle brackets around them. Swing the bar up and mount the saddle brackets with the set aside factory washers and bolts using supplied Loctite. Torque to factory spec. If using the SSRM110 kit with install the saddle bracket bolts should be torqued to 88 ft-lbs. Now go back and torque the two **1/2X13X3" Bolts (Item 4)** to **80-85 ft lbs**.
